

# a national PrEP programme

**7,200 people are estimated to be living with HIV in Ireland**

Of the 492 new diagnoses in 2017, just over half (53%) were among men who have sex with men (MSM), 33% were heterosexuals, while 4% were injection drug users.

**SAFE**

**EFFECTIVE**

**COST SAVING**

Most side effects are minor

Will cost less than treating HIV

173 infections could be prevented over 5 years

The successful implementation of a national PrEP programme would be safe, effective and cost-saving.
